Chief, Guided Missiles Branch, D/I

25X1A2g Requirements Submitted with Reference to Source under Control
Number ORR [REDACTED]

1. These requirements are submitted with the following facts in mind regarding the source.

- a. He is not a technically trained individual.
- b. He is undoubtedly travelling by air.
- c. His movements will be largely confined to urban areas.
- d. The main activities of his trip will be concerned with visiting places of academic interest.

However, source's language competence and general ability indicate that it might be worthwhile to include some general requirements in the hope that circumstances could prove them to be valuable.

2. The following requirements are divided into two categories. The specific category includes those requirements, some answers to which, the source may reasonably be expected to provide. The second, those general requirements referred to in paragraph one.

a. Specific

- (1) What is the observed extent and depth of the collections of scientific literature in the various libraries? In what American technical publications is the most interest shown?
- (2) Report on and describe in all possible detail the classified sections of Soviet libraries.
- (3) Report the names of those universities which may be engaged in classified research and provide any details possible such as; type of research, connections with other institutions or governmental organizations and types of

American technical publications in which they are interested.

- (4) In all university and library tours, note any books or reports on rockets, guided missiles and rare metals such as; titanium, rhenium, tantalum and columbium. It is particularly important that the author's full name be ascertained, not merely his first two initials and the last name.

b. General

- (1) During air flights, look for unusual construction of facilities particularly in sparsely populated and/or forested areas.
- (2) In urban areas, look for road-mobile equipment which may transport missiles. This equipment consists chiefly of multi-wheeled, rubber tired trailers almost as long as the missile. If a missile is being carried by such a vehicle, it will have only a canvas covering fitted to conceal the missiles general configuration.
- (3) During any rail trips, look for missile associated rail equipment which will consist of specially designed cars such as; oversized flatcars, gondola cars and freight cars with probable extensions on the ends.
- (4) If any observations pertinent to the preceding requirements are made, note and report carefully the physical characteristics of the object or facility seen, and the time and place of sighting.
